

Dear guest,
we have bikes of different brands, models and sizes.

Road bikes - aluminium frame and carbon fork, equipped with Shimano 105, Chainset 50/34 - Cassette 11/28, (11 speeds), approx. 9kg weight.

Road bike - full carbon frame and forks, equipped with different brands, Chainset 50/34 - Cassette 11/28 or similar.

Please complete our Bike Fit Form.

Then send it by email. You can have the bike sets up, ready to ride when you get here. We ask our guests to have a little bit of flexibility on bike fit, as bike measurements and set up may not always be exactly like your own bike at home.

CF = saddle height over bottom bracket

MA = distance from nose of the saddle to the center of the handlebar.

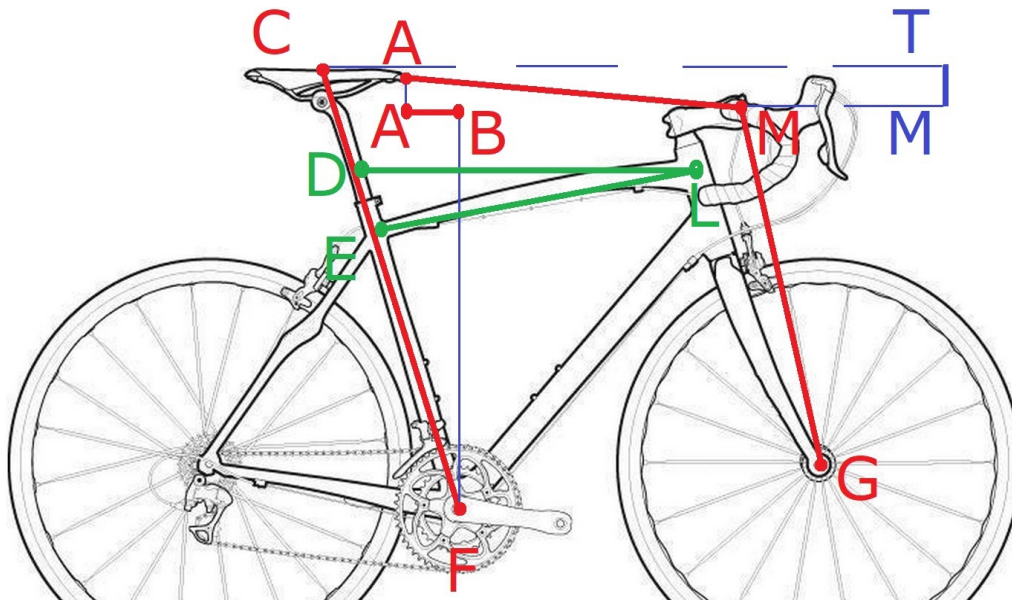

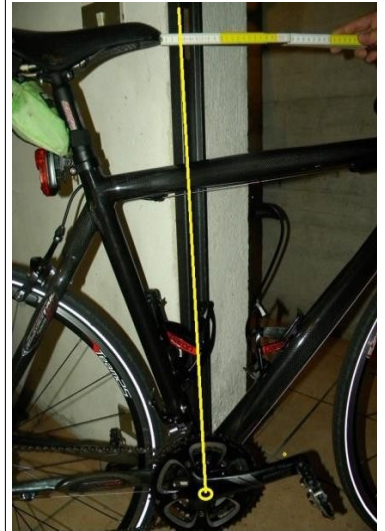

AB = Saddle setback over bottom bracket, also called saddle fore/aft position. You can use a plumb line or a door frame for measuring the saddle setback.---->

GM = Handlebars height. Center of front wheel axle to center of handlebars along the vertical axis. (Use the outside center of the quick release to make life easy).

Or you can compute the "drop" TM (which is even more exact) by measuring the difference between the height of the top of the saddle from the ground and the center of handlebars from the ground along the vertical axis. We prefer this method when possible.

Inches / centimetres converter:
